

Secure Visitor Management!

Everyday visitors increasingly pose the greatest security threat to organizations. In most cases, visitors are allowed to freely walk the halls unchallenged. Without strong identification policies for visitors, many employees are hesitant to question an unidentified person, creating serious security risks to the organization.

BadgePass Visitor Manager simplifies the process of managing visitors by creating a secure visitor workflow, while actually reducing the time it takes to register a visitor. The BadgePass Server Platform provides realtime messaging and cross platform communication thus eliminating the need to manage and maintain a separate visitor database. With BadgePass Visitor Manager, visitors are identified, logged and badges are created with a simple three step process.

Features

- Email Alerts
- Custom Badge Designs
- Web-Based Reports
- Scan Drivers Licenses
- Web-Based Pre-Registration
- Email Evacuation / Onsite List
- Multi-Level Banned List
- Employee Tracking
- QuickPass™

Scan ID

When a visitor arrives, simply swipe their ID to automatically populate the new visitor enrollment screen. The BadgePass card reader will read state-issued ID's, drivers licenses, military ID's, INS cards, credit cards and can even be configured to read other proprietary formats.

Identify Visitor

The visitor is identified and additional information is gathered including who the visitor is meeting or where they are going. Detailed comments can also be added to each record. It's simple - the interactive screen guides you through each step of the process by bringing focus to each operation in logical sequence.

Issue Badge

Customizable badges are printed with the data required by your organization. Different badge templates can be designed and automatically printed based on visitor type and or visit purpose.

SPECIFICATIONS

Product Features

- **Custom Badge Designs** - Customizable badges can be printed with the data required by your organization. Different badge templates can be designed and automatically printed based on visitor type and or visit purpose.
- **QuickPass™** - As an alternative, we offer our QuickPass™ system to minimize desk space and eliminate the printer and additional scanner thus reducing hardware and supply cost. With QuickPass we utilize only the drivers license scanner and a set of pre-printed, reusable smartcards to identify visitors.
- **Reporting** - Reports are web-based and can be viewed by approved users on your network. You have access to all visitor information for as long as you've had BadgePass Visitor Manager in operation. Customized reports can be generated by your IT staff.
- **Drivers License Scanning** - The BadgePass card reader will read state issued ID's, drivers licenses, military IDs, INS cards, credit cards and can even be configured to read other proprietary formats.
- **Sys-Tray Operation** – BadgePass Visitor Manager resides minimized in the sys-tray of your computer. Basically, when you are not helping a visitor, you are able to multitask with other programs on the same computer.
- **Multi-Level Banned List** - Visitors can be banned from your entire organization, a specific campus, a specific building, or even not allowed to visit a particular employee or student.
- **Onsite Evacuation List** - The onsite list provides a snapshot of who is in your facility right now! This list can be printed and even emailed to someone's phone, as a muster report for emergency evacuation.
- **Employee Tracking** – Employees can be tracked in and out by scanning a barcode on their employee ID. This provides your organization with valuable data for emergency evacuation.
- **Image Capture** - Visitor images can be captured in several ways. A live capture camera can be installed or scan the drivers license to capture the photograph.
- **Web-Based Pre-Registration** – Visitors can be pre-registered into the system by your employees prior to the visitor arriving. This even further reduces the time it takes to register a visitor plus, provides sponsorship of visitors.
- **Background Checks** - Visitors data can be checked against various public databases. Our most commonly used is the National Sex Offender Public Registry.
- **Plug-In Center** – Enables execution of third-party applications in response to events within BadgePass Visitor Manager. This includes the ability to send in arguments using static text and or dynamic visitor data.
- **Active Directory™ Plug-in** - Provides the ability to synchronize BadgePass entities with your existing Active Directory™ Users to allow BadgePass modules to utilize your existing network environment for security and access permissions.
- **Event Notification Service** - Provides real-time notifications via... text feeds, emails or custom alerts in response to events within the BadgePass System.
